1. High-Level Concept (Problem & Solution)

- **Problem (ED-02):** College me engineering/degree students ko samajh nahi aata ki unke current skills ke hisaab se kaunsi job role best hai, unme kya kami (skill gap) hai, aur step-by-step kaise taiyari karein.
- **Solution:** CareerPath AI student ka test leta hai, ek **transparent mathematical formula** se top 3 careers nikalta hai, **Green/Yellow/Red** me skill gaps batata hai, aur **weekly learning roadmap** bana kar deta hai jisme task complete karte hi progress live update hoti hai.

---

2. Complete Step-by-Step User Flow (Website par kya hota hai)

mermaid

```
graph TD
    A["1. Landing Page (3D Three.js Universe)"] --> B["2. Instant Registration (JWT Auth)"]
    B --> C["3. 3-Step Assessment (Academics, Interests, Skills)"]
    C --> D["4. Deterministic Matching Engine (60/25/15 Math)"]
    D --> E["5. Recommendations & Tri-Color Skill-Gap Analysis"]
    E --> F["6. Market Trends & Salary Insights (Adzuna API)"]
    F --> G["7. Dynamic Roadmap Generation (4/8/12 Weeks)"]
    G --> H["8. Task Completion & Atomic Progress Tracking"]
    H --> I["9. Student Dashboard (3D Holographic Progress Orb)"]
```

Step 1: Landing Page & 3D Universe

- Student landing page par aata hai toh use **Three.js** se bana **3D Career Universe** dikhta hai (1,000 stardust particles aur 5 glowing orbital nodes — Frontend, Full-Stack, Data Science, etc.).
- Node par hover karne par career details ka HUD tooltip aata hai.
- **Smart Fallback:** Agar kisi student ka phone ya laptop purana ho jisme WebGL/GPU support nahi hai, toh code crash nahi hota — website automatically **2D glassmorphic cards** me switch ho jati hai.

Step 2: Instant Registration & Authentication

- Name, Email, Password enter karte hi backend par request jati hai.
- Password **bcryptjs** se hash hota hai aur secure **JWT (JSON Web Token)** generate hota hai jo browser ke `localStorage` me save hota hai.
- 1-click me student assessment wizard par redirect ho jata hai.

Step 3: 3-Step Student Profiling Assessment

Wizard me 3 clean steps hain:

1. **Academics:** Degree (BCA, B.Tech), Branch (CS, IT), Passing Year.
2. **Interests:** Multi-select chips (Web Dev, AI, Cloud, Problem Solving).

3. **Skills & Proficiency:** 45+ standardized industry skills me se select karta hai aur har skill ka level choose karta hai:
    - 🟢 Beginner
    - 🟡 Intermediate
    - 🔴 Advanced
    - *(Extra Feature: Agar koi nayi skill jaise Rust ya Web3 list me nahi hai, toh student khud type karke add kar sakta hai).*

Step 4: The Core Recommendation Engine (Sabse Important Part!)

Yahan koi fake LLM guessing nahi hoti. Backend ek **deterministic mathematical formula (60/25/15)** use karta hai:
$$\text{Career Match Score} = (\text{Skill Match} \times 0.60) + (\text{Interest Match} \times 0.25) + (\text{Education Match} \times 0.15)$$

- **60% Skill Weightage:** Student ke skills aur job ke required skills ka overlap (with proficiency weights: Adv=1.0, Inter=0.7, Beg=0.4).
- **25% Interest Weightage:** Student ke interests aur career domain ka match.
- **15% Education Weightage:** Degree aur academic eligibility.
- **Result:** 0.1 second ke andar top 3 careers rank hokar screen par aa jaate hain.

Step 5: Tri-Color Skill-Gap Breakdown

Recommendation card par student ko clearly 3 categories dikhti hain:

- 🟢 **Matched Skills (Green):** Jo skills student ko already aati hain.
- 🟡 **Upgrade Needed (Yellow):** Jo skill aati hai but job ke liye higher proficiency chahiye.
- 🔴 **Missing Skills (Red):** Jo skill student ke paas bilkul nahi hai (Inhi par focus karna hai).

Step 6: Live Market Trends & Salary (Adzuna API)

- Card par "*Live Market Telemetry & CTC*" click karne par modal khulta hai.
- Isme real Indian tech jobs (TCS, Capco, Deutsche Bank) aur verified salary range (e.g., ₹4.5 LPA – ₹9.0 LPA) dikhti hai.

Step 7: Personalized Roadmap Generator

- Student apna duration choose karta hai: **4 Weeks, 8 Weeks, ya 12 Weeks**.
- Algorithm student ke **Red (Missing) skills ko sabse pehle (Week 1 & 2)** me schedule karta hai, taaki foundation pehle bane.
- Har task ke sath real documentation links (MDN, freeCodeCamp, official docs) jude hote hain.

Step 8: Interactive Task Completion & Atomic Progress

- Jaise hi student koi task seekh leta hai, wo checkbox par tick karta hai.
- Checkbox par click hote hi backend ko `PATCH` call jati hai.

- Server automatically calculate karta hai: $\frac{\text{Completed Tasks}}{\text{Total Tasks}} \times 100$.
- Progress bar smoothly animate hoti hai aur state database me save ho jati hai (page refresh karne par bhi tick rehta hai).
- **1-Click PDF Export:** Student print button daba kar apne pure roadmap ka clean timetable PDF download kar sakta hai.

Step 9: Student Dashboard & 3D Holographic Orb

- Dashboard par student ko uska active goal aur agla task dikhta hai.
- Ek **3D Holographic Progress Orb** ghumta hai jo student ki completion percentage ke hisaab se glow karta hai.
- **Quick Skills Manager:** Nayi skill seekhne ke baad pura assessment dobara dene ki zaroorat nahi — modal se 2 second me skill update ho jati hai.
- **Dual AI Mentor:** Bottom-right me chat drawer hai jo Groq Llama 3.3 70B se <500ms me doubt solve karta hai, aur agar internet slow ho toh Google Gemini failover par switch hota hai.

---

3. Technical Architecture (Under the Hood)

Component	Technology	Role
Frontend	HTML5, CSS3, Vanilla JS, Bootstrap 5	Fast, lightweight UI without heavy framework bloat.
3D Graphics & Motion	Three.js & GSAP	Hardware-accelerated 3D particles, orbital nodes & progress orb.
Backend API	Node.js + Express.js	RESTful routes, JWT validation, math-scoring controller.
Database	MongoDB Atlas (Cloud)	Collections for Users, Assessments, Careers, and Roadmaps.
Authentication	JWT + bcryptjs	Stateless auth; secure password hashing.
Media & Resumes	Cloudinary	Profile avatars and student resumes upload.
Job Market Telemetry	Adzuna Developer API	Live tech hiring vacancies and salary data.
AI Mentor Engine	Groq (Llama 3.3 70B) + Gemini 2.0	Ultra-fast career mentorship and Q&A chat.
Deployment	Vercel (Frontend) + Render (Backend)	24/7 global CDN + cloud server hosting.

---

4. Judges ke Samne Bolne ke 4 Golden Points (Winning Factors)

Jab judges puchein ki aapka project doosron se alag kyun hai, toh ye 4 points bolna:

1. **"Zero Hallucination (Explainable Math Engine)":** *"Sir, humne career match ke liye black-box AI ko guess karne nahi diya. Humne 60/25/15 ka deterministic mathematical formula banaya hai, jisse student ko pata hota hai ki uska score 78% kyun aaya."*
2. **"Actionable Gap Analysis, Not Just a Quiz":** *"Baaki platforms sirf quiz result dekar chhod dete hain. CareerPath AI Green, Yellow, aur Red gaps batata hai aur unhi Red gaps par based customized weekly roadmap bana kar deta hai."*
3. **"Universal Accessibility (2D Fallback)":** *"Hamara 3D Three.js UI high-end laptops par impressive lagta hai, lekin agar tier-3 college ke student ke paas sasta phone/laptop ho, toh code crash nahi hota — automatic 2D fallback activate ho jata hai."*
4. **"Production-Ready Architecture":** *"Frontend Vercel par deployed hai, backend Render par, database MongoDB Atlas par, aur AI Groq Llama 3.3 par sub-500ms speed deta hai."*
